DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, 6, drawn to device for measuring object position including five sensors on an articulated mechanical arm, classified in class 73, subclass 865.9.
- II. Claim 5, drawn to procedure determining dynamic behavior of a passenger vehicle based on measuring wheel position, classified in class 702, subclass 94.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process may use a device without articulated mechanical arm such as a camera based system.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
